NO BETTER TIME THAN NOW... TO BUY THE BEST BULL YOU CAN AFFORD!!!!

With the lows in the cattle cycle behind us, the calves sired by the bulls you buy now will be worth more per pound—maybe reaching the highs of 2014!

Feeder Calf Price per pound has already increased almost 12% in 2021!

• POUNDS PAY/SUPERIOR GENETICS PAY!!!

Your bulls supply 50% of your calf crops genetics and their potential to make you more profitable. Whether you sell off the cow, retain replacement heifers, place them in a feedlot or market your own beef—the bull genetics you buy has more influence on your future than any other one thing you do.

No matter how well you manage your grass, herd health or marketing; the profit potential and quality of your calf crop is limited by their genetic potential; half of which comes from the bulls. If you retain replacement heifers, 100% of your future calf crops genetics come from the bulls you buy!!!

• BULL BUYING DECISIONS ARE CRITICAL TO YOUR SUCCESS!!!

As you study this catalog, you'll notice we produce and develop bulls differently. Our 17 Quality Standards eliminate the poor genetics and our 5 Star System helps you identify the right bulls for your program without having to know all of the numbers or wonder what's really under all of the fat.

Offering genetics from 4 breeds and their hybrids/composites gives you the best genetics available plus the tremendous advantages of cross bred vigor.

TRUST YOUR FUTURE TO GROWN ON GRASS "BRED 4 PROFIT/BUILT 2 WORK" BULLS!!!

THANK YOU and GOD BLESS!!

Comments From Our Customers

John Clemons, Missouri

I have been very pleased with the bulls that I have purchased from Flying H Genetics. I love that they are 18 months old and raised on grass. They are always slick-haired, hardened-up, and ready to go to work. With a great selection of bulls that are Fescue Adapted and won't melt away, Flying H bulls really fit my program. I love the growth and performance of the calves sired by the bulls – all in all, I am very pleased and happy with my bulls.

Todd Lawson and Houston Farms, Missouri

Buying Flying H bulls has given us a HUGE improvement in the quality and weight of our calves. We bought our first bulls from Flying H in 2012 and now are exclusively a Flying H Genetics customer. They produce great bulls and stand behind them 100%. They have a large number of bulls to choose from and the calves out of our FHG bulls are the best we have ever produced.

Tyler Keckley of Southern Roots Ranch, Missouri...

I bought my first bull from Flying H Genetics this spring and, being a first generation rancher, working with a seedstock producer I can trust is a must. The team at Flying H Genetics helped me select a bull that fits our operation of conception to consumption freezer beef so we need a bull that has it all: easy calving, not too much milk and fertility for replacements but also growth, muscle, and finish ability for our freezer beef. Although we don't have any calves yet from our Fusion bull

(our bull is ½ Gelbvieh, ¼ Red Angus, ¼ Simmental), we did get our pregnancy results back (we use blood tests) and we have 100% pregnancy rate. The bull walked off the trailer and pretty much got started to work. I believe that the fact that the bull is 'Grown on Grass' and not off a feed test makes a big difference on his performance off the trailer and with a 100% pregnancy rate I would say he has performed! This is my first bull purchase from Flying H Genetics but it won't be my last.

FLYING H GENETICS – COOP HERDS

We can offer you this tremendous set of bulls thanks to the hard work and genetic craftsmanship of the breeders below. The Flying H network is a series of relationships

Arp Cattle Co. (ARPS)

Kayser Brothers Simmentals (KB)

that allow our herds and those of our coop breeders to function as one interconnected collection of genetic resources for our customers

Chris Gaines (CG)

Southern Cattle Co. (SCC)

FURTHER INFORMATION:

INSPECTION OF SALE CATTLE: The cattle are at the ranch and are ready for viewing any time prior to sale day. Please call ahead so someone is available to help you.

TERMS AND CONDITIONS: All cattle sell according to the terms and conditions recommended by the American Gelbvieh Association. Terms of the sale are cash. Every animal will be sold to the highest bidder. Announcements sale day take precedence over printed material in this catalog. All cattle are the property of the buyers as soon as sold and will be cared for until Dec. 1st at no additional cost. Buyer may pickup their purchases anytime after the sale or Flying H Genetics will deliver according to their delivery policy as stated in the sale book.

Any person attending the sale does so at their own risk. Neither the owners or Flying H Genetics assumes any liability, legal or otherwise. All animals listed in the catalog as being Homozygous Polled or Homozygous Black are done so to the best of our knowledge. We are not liable for any inaccuracies. Registration papers will be transferred to the new buyer at the sellers expense.

ABSENTEE BIDS: The following 3 options are available.

1. Call a member of the FHG Staff for a conference call buyer number (info on page 1).
2. Register, view and bid online with DVAuction.com
3. Call a member of the FHG Staff or Livestock Press to have it handled personally..

HEALTH AND BREEDING SOUNDNESS: All animals have been on a complete health program and health papers are available for all 48 states. All bulls will have passed a Breeding Soundness Exam and Semen Test prior to the sale. All sale animals have also been tested negative for PI BVD.

Since 1982

*Flying H Genetics has
guaranteed calving ease on
every bull sold. Bulls for use
on heifers are identified with the
Show Me Select stamp.*

Flying H Genetics

retains 50% semen interest in every bull sold. The buyer receives 100% possession and resale or salvage value and 50% semen interest. - If Flying H Genetics chooses to utilize their semen interest, they will coordinate with the owner and pay all expenses for their semen. If a semen sales market develops on a bull, Flying H Genetics will work with the owner to promote and sell semen splitting the expenses and income 50/50. Again, this semen reserve does not affect the buyer's ability to have full use of and receive full sale price for the bull with the semen reserve following the bull to the new owner. We estimate that this may only affect 1 or 2 bulls per year. If you have questions, please contact the FHG Staff at any time.

ABBREVIATIONS AND EXPLANATIONS:

- CE – Calving Ease:** the higher the value the greater the calving ease expected in first calf heifers.
- BW – Birth Weight:** expressed in pounds, is a predictor of his ability to transmit more or less birth weight.
- WW –Weaning Weight:** expressed in pounds, is a predictor of his ability to transmit more or less pounds at weaning.
- YW – Yearling Weight:** expressed in pounds, is a predictor of his ability to transmit more or less pounds of yearling growth.
- MK – Milk:** is a predictor of his genetic potential for his daughter's milk and mothering ability.
- CW – Carcass Weight:** expressed in pounds is a predictor of his ability to transmit more or less carcass weight.
- RE – Ribeye Area:** expressed in square inches, is a predictor of his ability to transmit more or less Ribeye area.
- MB – Marbling:** expressed as a USDA marbling score & reflects his ability to improve marbling.
- INDEX**
 - ✓ **Simmental influenced cattle: API - All Purpose Index; Hereford influenced cattle: BMI - Baldy Maternal Index; Red Angus influenced cattle: HB - HerdBuilder Index** - These indexes calculate the total potential value of his birth, growth, carcass, muscle & maternal genetics.
 - ✓ **Angus cattle: \$B – Beef Value:** An index that accounts for all traits relevant to end product profitability (i.e. - growth and carcass performance)
 - ✓ **Simmental influenced cattle: TI - Terminal Index; Hereford influenced cattle: CHB - Certified Hereford Beef; Red Angus influenced cattle: GM - GridMaster** - These indexes calculate his terminal (non-maternal) value based on growth, muscle & carcass.
 - ✓ **Gelbvieh influenced cattle: FPI – Feeder Profit Index:** An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on grade and yield. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.
 - ✓ **Angus cattle: \$W – Weaning Value:** expressed in dollars per head, is the expected difference in maternal preweaning performance.
- PEDIGREE**
- FHG STAR RANKING SYSTEM**— This system ranks cattle in five major areas of customer genetic needs—Disposition, Growth, Muscle, Carcass and Maternal. In Missouri, where bulls are grown on fescue grass, we measure and rank them in a sixth area of need—Foragability. Disposition—1★ & 2★ Culled, 3★ Good, 4★ Better, 5★ Best. Growth, Muscle, Carcass, Maternal and Foragability—3★ ranking identifies breed average genetics for the trait, a 4★ ranks them within the top 50% to 25% of the breed and a 5★ ranks them within the top 25% of the breed genetically for the traits. Information used to develop these rankings includes performance measurements of the individual animal, his sire and his dam, EPDs and ultrasound data. Foragability – the scores for this rank system are derived from analysis of three important factors: 1. The individuals Grown On Grass gain ratio (how well he performed when compared to others eating the same fescue grass), 2. We examine the fat thickness of the individual ultrasound results (greater fat cover suggests and more easily fleshing animal) and/or DNA analysis & evaluation of his GE EPDs, and 3. The animals physical design is evaluated for capacity (individuals with more “guts” tend to be better foragers). Our Star Ranking System combines all the data into a simple ranking system to help you easily find the specific genetics you need for a trait or combination of traits. A more complete explanation of the Disposition Star System can be found on page 19.
- COLOR STATUS** - Homo. Black (will only produce black calves), Black (carrier of red color gene), or Red.
- POLLED STATUS**—Homo. Polled (by pedigree or DNA test) will produce only polled calves, Polled or Scurred (not horned).
- BREED MAKEUP**
- COOPERATOR HERD IDENTIFICATION**
- INDIVIDUALS BREED ASSOCIATION ASSIGNED REGISTRATION NUMBER**
- INDIVIDUALS BIRTH DATE**

- Yearlings (Open or Bred)
- Weaned Heifer Calves
 - Spring or Fall
- Commercial or Registered

MARKETING ASSISTANCE

- Customer Calves
- Customer Females

WHAT DOES THIS MEAN?

BRED 4 PROFIT is fairly easy to explain, we're talking genetics both measured and observed. Utilizing DNA enhanced EPDs combined with phenotypic criteria allows us to make genetic progress in multiple traits at the same time. These tools allow us to produce Superior Genetics and some not so superior genetics that must be eliminated. With Flying H Genetics' 17 Quality Standards as our guide we can now produce more Superior Genetics than ever before.

BUILT 2 WORK is a challenge because it requires us to do what is right and not necessarily the most profitable.

For many decades, most bulls sold have been developed for Sale Day--clipped and washed and fattened to look their very best so they'll bring more money.

Not a bad idea from the seller's side of the fence, but what about the bull and the bull buyer?

Why is it so hard to put the buyer and the bull first when deciding how to develop sale bulls? Excess FAT is detrimental to both the bull's longevity and the buyer's ability to evaluate true muscling, thickness and growth. Does 200 pounds of extra fat really make the bull more muscular or growthy just because he weighs 200 pounds more? NO!

We know EPDs predict genetics but did you know that FAT predicts lazy, bad footed bulls?

Flying H Genetics has been developing ROUGHAGE 'N READY and GROWN ON GRASS/ FESCUE ADAPTED Bulls for years because it's better for the bulls and our customers. Our bulls are developed into athletic, muscular and aggressive breeding machines with hard, sound feet and legs, correct structure and are guaranteed breeders. Take your pick—Superior Genetics BUILT 2 WORK!

Are Fescue Adapted Bulls Better?

Have you ever run a marathon, taken a driving test, played golf or went deer hunting without getting prepared? I doubt it, but if you did you probably did not do very well. So, why would you buy fat, lazy bulls that are fed way too much corn to look good and thick and then turn them out to work at breeding cows on Fescue grass for which they are not prepared?

Yes, Fescue Adapted, Grown On Grass® bulls are better because their superior genetics are designed and developed to work for a living. They are athletic, conditioned and ready to do the job you expect them to do. They will not be fat but they are muscular, structurally sound with good feet and legs, and conditioned to work hard for you.

Even if you don't have Fescue grass, being Grown On Grass® ensures that our bulls will be able to perform, breed, and thrive on ANY type of grass/forage.

It took a while to "figure it out," but developing bulls on Fescue Grass in Missouri is a customer friendly, proven concept that really does work. Our customers tell us our Grown On Grass® Fescue Adapted bulls are more aggressive, breed more cows and last longer because of the way we develop them.

FLYING H GENETICS' FESCUE ADAPTED BULLS ARE BETTER BECAUSE YOU GET SUPERIOR GENETICS DEVELOPED TO DO THE JOB YOU EXPECT THEM TO DO WITHOUT ANY FRUSTRATING DELAYS!

FLYING H GENETICS DISPOSITION SCORING

Because disposition is a very important management and safety issue, Flying H Genetics has researched and developed a system to score all of their cattle, including any cattle sold for breeding purposes, for disposition to eliminate the unacceptable ones. We have been culling on disposition for years but scoring them quantifies and identifies them more accurately making culling more accurate and effective.

Cattle are a herd instinct animal. Separate them from the herd and their natural response is to flee back to the group or fight for their life. Domesticating them has gentled them but their natural instincts of flight and fight are still there at varying degrees. Generally, the sooner and more often cattle are in contact with and handled by humans in a calm, non-threatening way, the more trusting and less flighty or threatened they will feel.

Knowing this, our system separates an individual animal from the group into a small pen with one or two people to add a common stressor. Since all cattle have a different disposition (just like people) this will create different degrees of nervousness, flight and fight that can be scored. Scoring the different levels of nervousness, flight and fight allows us to identify different levels of disposition. The scores range from 1 to 5 with 5 being the most calm. This is a subjective score but certain actions help group the cattle into the five different levels. Following is a general description of the type of actions observed while scoring that help rank each individual's disposition.

One Star—animal is very nervous and agitated and is looking for an escape route. Will not stop and stand, tests the fence and will show fight and turn on you if pressed. When the out gate is opened he leaves on the run. He's always at the back of a group, head up and keeps his distance. He will make others nervous and flighty and is hard to sort from the group. Anything new will create great distress and he will get more agitated the longer he's held separately. Due to safety issues, these are culled immediately.

Two Star—animal is nervous and very uncomfortable. He will keep moving, walking the fence and trot or run if approached. Not as likely to show fight but will exit fast. Very observant and

FORAGABILITY	★★★★★

keeps his distance even in a group. He will be a little hard to sort from the group. He's always nervous and flighty in a strange situation. He presents a safety concern and causes handling problems with the whole herd so is culled ASAP.

Three Star—animal is uncomfortable wanting to keep distance. He will stop but is very attentive and moves without much pressure. He'll exit at a fast walk or slight trot. Handles fine in a group but gets nervous when separated, wanting to rejoin the herd. Can get excited if pressured or forced out of comfort zone so low stress, low pressure handling helps.

Four Star—animal moves when pressure is applied but will stop easily. Will stand and allow you to approach but not get too close. Exits at a walk. Fast movements, loud noises and strange situations will make him nervous. Low stress handling works great.

Five Star—animal is very calm and gentle, easy to sort and move. Will stand, allow you to approach and maybe touch him and may even approach you. Needs to be urged to leave the pen. Can get excited but calms down quickly. Responds well to proper handling.

BREEDING SOUNDNESS DEVELOPMENT & EXAM

Every bull we sell has had a thorough breeding soundness exam of his testicles for size, conformation, and overall quality. His prostate and seminal vesicles are also examined via rectal palpation to make sure he is free of any infection. Each bull has given a high quality semen sample examined under a microscope by a veterinarian. Furthermore, each bull receives the following vaccination protocol for his protection and durability:

- Wormer (pour-on, injectable or oral)
- Blackleg (Clostridial vaccine)
- Modified live—5 way (Lepto, Vibrio, BVD Type 1 & 2, IBR)
- Multi Min 30 injectable mineral
- Individual metal ID ear clip that will correspond to all state and federal regulations for animal identification. Each bull also comes with complete documentation of his BSE & semen test

IDENTIFYING HEIFER BULLS

It is very important to correctly identify bulls to be used on first calf heifers. Therefore, we use a combination of two tools. We start with the guidelines for heifer bull qualification established by the University of Missouri Extension's **Show-Me Select Heifer Program**. This system ranks bulls with the desired amount of calving ease or CE to work on heifers and minimize any chance of calving difficulty due to the size and shape of the calf. The Show-Me Select Program has set minimum thresholds for CE that a bull **must** have to be used on a heifer. Furthermore, those standards are based on EPDs calculated by breed associations only - i.e. no generically calculated numbers. We also use some data we collect to help strengthen the accuracy of this process. We analyze a bull's birth weight and physical design to assess their ability to make a "sleep at night" CE bull. All Bulls in this catalog that meet or exceed the standards set by the Show-Me Select Program and our secondary evaluation will be identified by the "Show Me Select Heifer Qualified" stamp in their lot box. If you have any questions contact us and refer to the Show-Me Select website at <http://agebb.missouri.edu/select/prgmreq.htm>

DEATH & INJURY WARRANTY

Flying H Genetics has offered to share death and injury losses suffered during the first breeding season with customers for years. After some confusion over the old warranty and interest by many customers to cover the full cost of their purchases at a reasonable cost, we have initiated the following warranty:

COVERAGE/LIMITATIONS

The coverage of this warranty is limited to the first breeding season or a maximum of 6 months from the date of purchase, unless other arrangements are made ahead of time. Indemnity under this warranty covers all death and loss-of-use injuries except those caused by negligence or willful misconduct or mistreatment of the bulls covered. Replacement value will be limited to actual purchase cost of the Flying H Genetics bull covered minus any salvage value or other compensation received by the customer.

CLAIMS

All claims for death or injury must be reported to Flying H Genetics within 24 hours of discovery and a complete diagnosis by a licensed veterinarian must be reported.

INJURED

If the injury is not life threatening or permanent and the bull can be returned to service, Flying H Genetics will work with the customer to supply a replacement bull to use at no cost, until the original bull can be returned to service.

LOSS DUE TO INJURY

If the injury is permanent and prevents the bull from returning to service, Flying H Genetics will supply a replacement bull as close to the original bull's type and quality as possible to complete the first breeding season. At the end of the breeding season, the customer can keep the bull as

VOLUME DISCOUNT ON BULLS

Volume discount of 5% will be credited on 5-9 bulls and 10% discount will be credited on 10 or more bulls purchased in either the Nebraska or Missouri sales or combined purchases from both sales. You can use your purchases in Nebraska to help meet the volume discounts in Missouri to be applied to bulls purchased in Missouri.

LIMITED FREE DELIVERY

Flying H Genetics has offered limited free delivery for 20 years as a customer service and because we think it is important to visit your ranch, see your cattle and make sure our cattle are helping you produce the genetics you want.

Since we sell cattle nationwide, fuel and equipment costs force us to put some limits on free delivery. The seed stock business, like all other businesses, must address the costs of product delivery as part of their overall customer service plan.

To treat every customer fairly, we have established the following delivery policy:

- A. Every animal valued over \$3,000 will be delivered free within 200 miles of sale location.
- B. All other animals valued over \$3,000 will be delivered the first 200 miles free with additional miles prorated per head with freight charges guaranteed not to exceed \$250 per head.
- C. Animals valued less than \$3,000 will be delivered on a case by case basis. If you have any questions, please contact our FHG Staff.

the replacement bull as fulfillment of this warranty or return him to Flying H Genetics and receive credit on a replacement in any upcoming sale. The credit will equal the price of the original bull minus salvage value if any from the original bull. The customer agrees to provide humane care and obtain maximum salvage value from the injured bull. This guarantees the customer a bull to get their cows bred and full compensation for the purchase price of the bull through a replacement they get to pick and price.

LOSS DUE TO DEATH

When a Flying H Genetics bull dies between the date of purchase and the end of the first breeding season, through no fault of the customer as described above, Flying H Genetics will supply a replacement bull, as close to the original bull's type and quality as possible, to finish out the breeding season. At the end of the breeding season, the customer can either keep the replacement bull as fulfillment of this warranty or return him to Flying H Genetics and receive credit on a replacement in next year's sale. This credit will equal the purchase price of the original bull minus any compensation received if insured by an insurance company. This guarantees the customer a bull to get their cows bred and full compensation for the purchase price of the bull through a replacement they get to pick and price.

COST

Cost for the death and injury warranty will be 10% of purchase price, due at the time of purchase. If a customer chooses not to cover their animal against death and injury, they assume all loss due to death or injury of their bull. This warranty does not affect other customer services like the quality and calving ease guarantees that all Flying H Genetics bulls carry.
